## ABSTRACT

*The Brains that pull the Triggers. 2nd Conference on Syndrome E, Paris IAS, 09-10 May 2016 - Session 1 - Empathy and Dehumanization*

Among the possible brain mechanisms involved in the Syndrome E there is the question of the sharing of emotions or social values. This question is related to the neural basis of empathy and its potential suppression in these behaviours. I will briefly discuss my views and results concerning the brain mechanisms which distinguish sympathy and empathy. I will also discuss the potential relationship of these neural basis with the question of multiple identities and denial of human identity of the other.
